

Figure 1

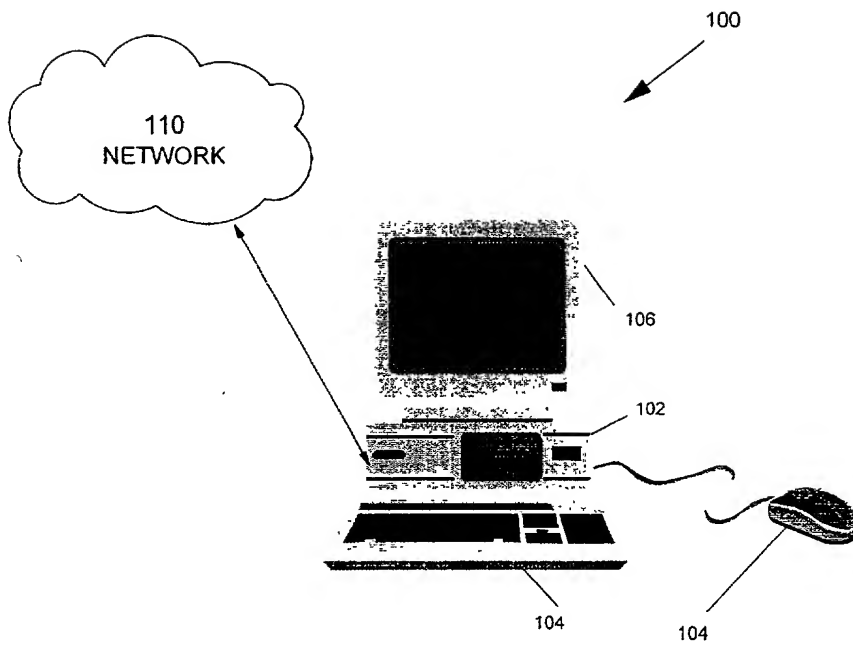

FIGURE 2

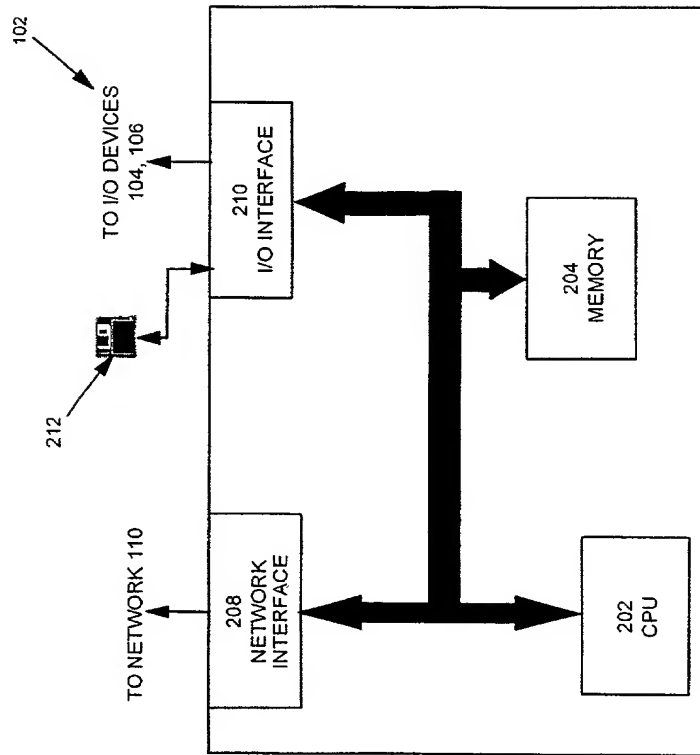

FIG. 3 is a block diagram of a system 204 for managing application version data. The system 204 includes an application data component 308, an application version data repository 314, a server configuration data component 312, and a server configuration versioning tool 310. The application data component 308 is connected to the application version data repository 314. The application version data repository 314 is connected to the server configuration versioning tool 310. The server configuration data component 312 is connected to the server configuration versioning tool 310. The server configuration versioning tool 310 is connected to an integrated development environment 306, which is connected to a communications suite 304, which is connected to an operating system 302.
